

MAG-PLASTIC MACHINERY SA

Innovations in stretch blow moulding technology: The SSB-02 machine.

Since March 2002, Magplastic® is a member of the SIH Group, a Swiss holding company under which several well-known businesses are established all active in the automation and packaging industry.

A new group, a new strategy, a new logo, and a new machine for PET bottle production.

The Magplastic® stretch blow moulding systems, already worldwide known for the production of high quality biaxially oriented PET containers, has been further improved by this new SSB-02 stretch blow moulding machine.

The completely new preform loading system, productivity increased of more than 10 %, power consumption reduced by 30 %, and a preferential heating process option, are the main innovations proposed by this new SSB-02.
