

PRESS RELEASE

FOR IMMEDIATE RELEASE

Vouvry, November 22, 2006

As an on-going effort to meet the ever changing market requirements for customised PET stretch blow-moulding machinery, MAGPLASTIC MACHINERY S.A. has entered into a cooperation agreement with SISTEC S.r.l.

This agreement enables Magplastic to successfully offer specialised PET blow moulding equipment for containers up to 25 litres and increase the cavitation of its machines up to ten cavities.

As a result of this cooperation agreement, the complete machine portfolio of Sistec formerly sold under the brand name "ALKAM" has been integrated into the Magplastic offering. Sistec technical experts will continue contributing to the future evolution of this new machine range.

The new, broader linear machine portfolio of Magplastic will fulfil the needs of customers in particular in the emerging segment of the PET containers up to 25 litres and in the category of large cavitation machines reaching up to 10 cavities.

Magplastic will be in charge of marketing and technical support of the complete portfolio. They will therefore further deploy their current organisation for faster and more effective customer assistance. An extension of their quality production infrastructure is also planned to cope with the growing production demand.

With more than 800 machines sold worldwide, Magplastic is a global benchmark in customised PET stretch blow-moulding solutions. This line extension will benefit greatly both existing and future customers by offering them a broader selection of quality machinery, enabling them to satisfy the needs of an increasingly fast changing market.
